Abstract: In today’s rapidly changing society, higher education is facing an urgent need to cultivate talents with innovative spirit and entrepreneurial ability. As the requirement of adapting to the development of the era, innovation and entrepreneurship education has gradually become one of the important directions of teaching reform in colleges and universities. This article aims to explore its role and significance in improving the quality of education, cultivating students’ comprehensive quality, and promoting social and economic development through in-depth research on the teaching reform practice in colleges and universities based on innovation and entrepreneurship education. The research will focus on the practical cases of innovation and entrepreneurship education in different universities, combining qualitative and quantitative research methods, from multiple dimensions such as curriculum design, teaching mode, and practice platform construction, to comprehensively analyze the scope and methods of innovation and entrepreneurship education in the teaching reform of universities, in order to provide useful guidelines for the reform of higher education.

Keywords: Innovation and entrepreneurship education; Teaching reform in colleges and universities; Practice

1. Introduction

In today’s rapidly changing society and the wave of knowledge economy, higher education is facing unprecedented challenges and opportunities. The shortcomings of traditional education model have been discovered, this model can no longer meet the increasingly diverse and complex talent needs. As a brand-new educational paradigm, innovation and entrepreneurship education is attracting widespread attention and in-depth research. Its core idea is to cultivate students’ innovative thinking, practical skills, and entrepreneurial spirit, so that they can stand out in the ever-changing social environment and become modern talents with innovation and creativity. Teaching reform in colleges and universities aims to integrate innovation and entrepreneurship education into teaching practice, explore a more targeted and adaptable education model, and better meet the urgent needs of society for talent training. Based on this, this study aims to deeply explore the practice of college teaching reform based on innovation and entrepreneurship education, and analyze its key elements such
as theoretical basis, practical strategies, and teachers’ roles, in order to provide useful guidelines and inspiration for college education reform.

2. Concept and connotation of innovation and entrepreneurship education

Innovation and entrepreneurship education is an educational method to cultivate students’ innovative thinking and entrepreneurial ability, emphasizing the cultivation of students’ innovation consciousness, creativity, teamwork, and problem-solving skills. Its connotation not only includes imparting knowledge, but also emphasizes on cultivating students’ practical skills and innovative thinking, so that they can cope with various challenges in their future careers.

First of all, innovation and entrepreneurship education cultivates students’ innovative thinking and entrepreneurial awareness, and stimulates their innovative potential. In the era of knowledge economy and rapid development of science and technology, innovation has become an important force to promote social progress. Through innovation and entrepreneurship education, students learn to think about problems from different perspectives, find innovative solutions, and develop the ability to discover and solve problems. The cultivation of this innovative thinking not only makes students competitive in the academic field, but also lays a solid foundation for their future careers.

Secondly, innovation and entrepreneurship education emphasizes the cultivation of practical skills and helps students to apply theoretical knowledge to practical operations. By participating in entrepreneurial projects and practical activities, students can better understand and master the knowledge they have learned, and apply it to solve practical problems. This kind of practical exercise not only enhances students’ self-confidence, but also accumulates valuable experience and skills for their future career development.

In addition, innovation and entrepreneurship education focuses on cultivating students’ teamwork and communication skills. In modern society, many problems need to be solved through teamwork, and teamwork is inseparable from good communication and coordination. Innovation and entrepreneurship education enables students to learn to cooperate with others and coordinate division of labor through team projects, cooperative practice, etc. It also cultivates their teamwork and communication skills, enabling them to better adapt to a diverse social environment.

In general, innovation and entrepreneurship education is not only an important part of teaching reform in colleges and universities, but also a key method to shape students’ comprehensive quality and cultivate future social elites. It not only empowers students to innovate and start businesses, but also enables them to become modern citizens with innovation consciousness and practical skills, and contribute wisdom and strength to the development and progress of society.

3. Problems in the teaching reform of colleges and universities based on innovation and entrepreneurship education

In the teaching reform of introducing innovation and entrepreneurship education into rural colleges and universities, some unique problems and challenges are encountered. Firstly, the educational resources of rural colleges and universities may be relatively limited, resulting in difficulties in the implementation of innovation and entrepreneurship education, including teachers, equipment, and funds. Secondly, the innovation and entrepreneurship environment in rural areas is relatively weak, and students may have fewer opportunities and platforms for innovation and entrepreneurship, which may have an impact on their entrepreneurial interest and skills training. In addition, the subject structure and students’ characteristics of rural colleges and universities...
are different from those of urban colleges and universities. It is necessary to tailor the content and methods of innovation and entrepreneurship education to adapt to the actual situation in rural areas. In terms of teacher team building, rural colleges and universities may face the difficulty of recruiting and training teachers with innovative and entrepreneurial knowledge and skills. At the same time, the imperfection of the evaluation system may also affect the evaluation of the effects of innovation and entrepreneurship education and the accurate measurement of students’ ability. In response to these problems, rural colleges and universities need to formulate targeted strategies and plans, strengthen resource integration, teacher training, and expansion of practical opportunities, so as to promote the in-depth development of innovation and entrepreneurship education in rural areas.

4. Integration of teaching reform and innovation and entrepreneurship education in colleges and universities

The rapid development of the world and the rise of the knowledge economy are driving the re-examination and reform of the higher education model. Traditional college education, which emphasizes knowledge imparting and theoretical research, was once an effective way to cultivate talents. However, with the profound changes in the social structure and economic pattern, the traditional education model can no longer meet the needs of modern society. Traditional education focuses too much on passive knowledge acceptance. In this model, students often lack the training of practical operation and innovative thinking, thus it is difficult to adapt to the speed of social change and the diverse needs. In the face of global competition and the rapid rise of emerging industries, college graduates not only need to have solid professional knowledge, but also innovative spirit, practical skills and entrepreneurial awareness. For this reason, teaching reform in colleges and universities is imperative. As a new educational model, innovation and entrepreneurship education emphasizes the cultivation of students’ innovative thinking, practical skills, and entrepreneurial spirit, and it has received widespread attention and recognition. Innovation and entrepreneurship education focuses on students’ active participation and practical experience. Through project-driven and practical activities, students can learn to solve practical problems. This education model not only helps to cultivate students’ comprehensive quality, but also can better meet the society’s demand for innovative and entrepreneurial talents.

Therefore, the motivation of teaching reform in colleges and universities around the world stems from the reflection on the traditional education model and the needs of the development of modern society. As an important part of teaching reform, innovation and entrepreneurship education provides a strong support for cultivating outstanding talents who meet the needs of the future society, and promotes the development of higher education in a more practical, innovative, and comprehensive direction.

5. Innovation and entrepreneurship education with modern teaching concepts

Innovation and entrepreneurship education is in line with modern teaching concepts, emphasizing students’ subjective status and practical skills training. Innovation and entrepreneurship education focuses on cultivating students’ innovative thinking, teamwork, and problem-solving skills, which is consistent with the goal of modern education emphasizing the cultivation of students’ comprehensive quality and skills. Innovation and entrepreneurship education focuses on students’ practical operations in real projects, which is in line with the concepts of “problem orientation” and “learning to apply” advocated by modern education. Therefore, integrating innovation and entrepreneurship education into the teaching reform of colleges and universities can better achieve educational goals and cultivate qualified talents.
6. Methods of integrating innovation and entrepreneurship elements into teaching reform in colleges and universities

There are many ways to integrate innovation and entrepreneurship elements into the teaching reform of colleges and universities. Innovation and entrepreneurship courses can be set up to provide students with training in innovation and entrepreneurship knowledge and practical skills. Next, an innovation and entrepreneurship practice base or incubation center can be established to provide students with opportunities to participate in real projects and entrepreneurship practices. In addition, the use of case teaching, project-driven, and other teaching methods can better stimulate students' innovation potential and practical motivation. Colleges and universities can also cooperate with enterprises to carry out innovation and entrepreneurship education activities combining industry, education, and research, so that students can better understand industry needs and market trends.

7. Curriculum design and implementation of innovation and entrepreneurship education

7.1. Curriculum goal setting and framework construction

In the practice of teaching reform in colleges and universities based on innovation and entrepreneurship education, the setting of curriculum goals is very important. Through clear goals, targeted guidance can be provided for the cultivation of students’ innovative thinking and entrepreneurial ability. When constructing the curriculum framework, students’ subject background, interests, and development needs should be fully considered to ensure that the course content is consistent with the goals. At the same time, attention should also be given to interdisciplinary integration to promote the improvement of students’ comprehensive quality.

7.2. Teaching content selection and design

The content selection and design of innovation and entrepreneurship education courses should take both theoretical knowledge and practical operation into consideration. The course content should cover the basic concepts and methodology of innovation and entrepreneurship, as well as practical areas such as marketing and business models. Through case analysis, project-driven, and practical activities, it can help students to transform theoretical knowledge into practical skills, and cultivate problem-solving and innovative skills.

7.3. Innovative application of teaching methods

Innovation and entrepreneurship education courses should adopt a variety of teaching methods to stimulate students’ learning interest and participation. In addition to traditional lectures, activities such as group discussions, case studies, simulation experiments, and creative thinking training can also be introduced to cultivate students’ teamwork, communication, and innovation skills. At the same time, the use of information technology and online platforms can expand teaching resources and provide more opportunities for interaction and practice.

7.4. Establishment and optimization of teaching evaluation system

In order to effectively evaluate students’ innovative and entrepreneurial ability and performance, it is necessary to establish a scientific and appropriate teaching evaluation system. In addition to the traditional examination and thesis evaluation, comprehensive evaluation can also be carried out by means of project reports, team presentations, creative work exhibitions, etc. The evaluation system should focus on the development of students’ thinking mode, problem-solving skills, teamwork, and innovative skills, so as to better reflect the actual effect of innovation and entrepreneurship education.
8. Construction of innovation and entrepreneurship practice platform

8.1. Construction and cooperation of practice bases
In the teaching reform of colleges and universities, building an innovation and entrepreneurship practice base is an important way to provide students with opportunities for practical operation and practice. Through cooperation with enterprises, scientific research institutions, etc., a practice platform is built so that students can learn and practice in a real innovation and entrepreneurship environment. These bases not only provide equipment and resource support, but also provide students with mentor guidance and industry orientation, so that they can better apply theoretical knowledge to solve practical problems.

8.2. Cultivation and guidance of students’ innovation and entrepreneurship teams
Innovation and entrepreneurship education emphasizes the cultivation of teamwork and practical skills. Therefore, colleges and universities need to actively cultivate students’ innovation and entrepreneurship teams. Through course setting, project-driven, etc., students can be guided to form teams independently, so as to cultivate their teamwork and leadership skills. The college and university can provide the team with mentor guidance and resource support, encouraging them to practice in depth, so as to cultivate more talents with innovative and entrepreneurial spirit.

8.3. Organization and promotion of innovation and entrepreneurship competitions and activities
Innovation and entrepreneurship competitions and activities are important ways to stimulate students’ interest and enthusiasm in innovation and entrepreneurship. Colleges and universities can organize various innovation and entrepreneurship competitions, covering different fields and levels, to provide students with a platform for display and communication. These competitions can not only cultivate students’ innovative and entrepreneurial ability, but also promote academic exchanges and industrial development. By actively promoting these activities, students’ participation and enthusiasm can be stimulated, and the in-depth development of innovation and entrepreneurship education can be promoted.

9. Teachers’ team construction and professional development

9.1. Teachers’ training and capacity building
In the practice of college teaching reform based on innovation and entrepreneurship education, the training and skills improvement of teachers is a crucial part. By constantly updating educational concepts, teaching methods, and innovative knowledge, teachers can better adapt to the development of the era and the needs of students. Colleges and universities can organize various types of innovation and entrepreneurship education and training, and provide professional knowledge in teaching design, case analysis, and practical operation, so that teachers can better guide students and lead them to the road of innovation and entrepreneurship.

9.2. Teachers’ roles and functions in innovation and entrepreneurship education
Teachers play an important role in innovation and entrepreneurship education. In addition to imparting knowledge, teachers should also play the role of mentors and guides, encouraging students to be daring in innovation and cultivating their innovative thinking and practical skills. Teachers can also serve as instructors for innovation and entrepreneurship projects, guiding students to complete project design, implementation, and evaluation, so as to improve their practical skills.
9.3. Teachers’ experience sharing and exchange in teaching reform practice

Teachers’ experience sharing and exchange in the practice of teaching reform is very important to promote the development of innovation and entrepreneurship education\(^\text{[10]}\). Colleges and universities can regularly organize teacher seminars, conferences, and other forms of activities, allowing teachers to share their teaching experience and methods in innovation and entrepreneurship education, and learn from and inspire each other. Through the exchange and cooperation among teachers, it can promote the improvement of teaching and the in-depth development of innovation and entrepreneurship education.

10. Effectiveness evaluation, challenges, and suggestions

10.1. Improving the comprehensive quality of students in innovation and entrepreneurship education

The practice of teaching reform in colleges and universities based on innovation and entrepreneurship education has achieved remarkable results in cultivating students’ comprehensive quality. Students not only have a deep understanding in the field of professional knowledge through innovation and entrepreneurship education, but more importantly, it cultivates their innovative thinking, teamwork, practical skills and other abilities. They are able to better adapt to the rapid changes in society and have the courage to explore unknown areas, thus laying a solid foundation for future career development.

10.2. Challenges and difficulties in teaching reform in colleges and universities

Although innovation and entrepreneurship education has achieved certain results in the teaching reform of colleges and universities, it also faces some challenges and difficulties. Firstly, the uneven distribution of educational resources has limited the development of some schools in innovation and entrepreneurship education. Secondly, innovation and entrepreneurship education requires the teachers to have interdisciplinary knowledge and skills, which may be a challenge for teachers of some traditional subjects. In addition, the evaluation system of innovation and entrepreneurship education needs to be further improved to ensure the accurate evaluation of students’ innovation and entrepreneurship ability\(^\text{[11]}\).

10.3. Prospects and suggestions for the future development of innovation and entrepreneurship education

In the future, innovation and entrepreneurship education will still be an important direction of teaching reform in colleges and universities. With the continuous advancement of science and technology and the continuous development of society, innovation and entrepreneurship ability will become more and more important. Therefore, it is recommended that colleges and universities strengthen resource investment in innovation and entrepreneurship education, provide more training and support, and cultivate more outstanding talents with innovative and entrepreneurial spirit. At the same time, colleges and universities can further strengthen cooperation with enterprises and society, provide more practical opportunities, and enable students to better apply theoretical knowledge to solve practical problems. In addition, colleges and universities can also strengthen the construction of teaching staff, train more teachers with knowledge and skills of innovation and entrepreneurship, and promote greater achievements in innovation and entrepreneurship education.

11. Conclusion

The practice of college teaching reform based on innovation and entrepreneurship education not only injects
new vitality into the cultivation of students’ innovative skills and entrepreneurial spirit, but also provides an effective way to adapt to the development of the era and social needs. This study discussed in depth the theoretical basis of innovation and entrepreneurship education, the integration of teaching reform in innovation and entrepreneurship education, curriculum design and implementation, construction of innovation and entrepreneurship practice platform, teachers’ team construction and professional development, as well as effectiveness evaluation, challenges and suggestions. Innovation and entrepreneurship education has achieved remarkable results in improving students’ comprehensive quality and cultivating innovation and entrepreneurship ability. However, the teaching reform in colleges and universities still faces challenges such as uneven distribution of resources and imperfect evaluation system. Nevertheless, we have confidence in the future development of innovation and entrepreneurship education. Through continuous resource investment, teacher training, expansion of practical opportunities, and innovation in educational models, innovation and entrepreneurship education will play an increasingly important role in the teaching reform of colleges and universities, and make positive contributions to cultivating more outstanding talents with innovative and entrepreneurial spirits.
